

Customer start guide

A first-product walkthrough for when public installation becomes available.

PRE-LAUNCH • screenshots use sample data

Prepared: 25 September 2026

Current availability

As of 25 September 2026, the official landing page says App Store resubmission is in progress. These are post-installation steps, not an assertion that installation is open now.

Five steps after installation

Step	Action	Check
1	Open the app in Shopify and choose a workflow from Home.	Plan and remaining image quota.
2	Select a test product and review its source image and facts.	True color and specifications.
3	For photos, set category, model and background, then generate.	Category-appropriate settings.
4	Select a result and review image, copy and claims manually.	Logos, colors and unsupported claims.
5	Verify the destination, then attach or apply in Shopify.	Live product-page presentation.

☐ カスタム(全身、アップロード済 0枚)

Upper photo screen: select a product and category first.

A safe first run

- Start with a test product; verify the save destination and storefront result before applying to an important listing.
- Compare every image with the original product; reject changes to color, patterns, text or logos.
- Do not publish suggested copy or scan fixes without checking product facts, channel rules and applicable law.
- On error, check product selection, settings and quota. Inspect the result and Shopify listing before retrying to avoid duplicate saves.

Three first actions to try

Action	Try	Before saving
Photo	Generate one candidate with a chosen category, model and background.	Color, pattern and text fidelity.
Product copy	Draft a title and description against known facts.	Evidence for numbers, materials and claims.
Wording scan	Read findings and choose which suggestions to apply.	Resulting listing and relevant rules.

Sources and verification

Features and UI: current Palette Studio source (shopify-apparel-ai, checked 25 Sep 2026). Pricing and launch status: official landing page and current plan definitions. Screenshots show the Japanese UI with sample data in an isolated preview, not proof of live-store operation or production saving.
