

UreyukiBox — Partner Referral Guide

What you may say, what you must check, and what is still only a plan, when you write about, film, or pitch UreyukiBox.

In one sentence

UreyukiBox is a Shopify inventory and purchasing app that reads your sales and stock to show when and how much to reorder, and produces purchase orders built for Japanese requirements. It can also copy your data across from Stocky.

Who it is for

- Shopify stores looking for somewhere to move after Stocky's end of life
- Stores that have a stock list, but where reorder decisions rest entirely on one person's experience
- Stores trying to cut stockouts and overstock at the same time
- Stores that need purchase orders handling Japanese tax categories and qualified-invoice registration numbers
- Stores that want reorder alerts on email, Slack or LINE

Important — what is and is not available in English. The app screens, purchase-order PDFs and barcode labels follow the Shopify admin language, so a merchant on an English admin gets an English interface. **Notification emails, Slack and LINE messages are still Japanese only, and support is provided in Japanese.** Please state that plainly in any English-language article, video or pitch — and note that UreyukiBox's advantages are Japan-specific, so it is not a sensible recommendation for a store with no Japanese operation.

Five points worth making

1. **The reasoning behind each suggestion is visible**
Reorder point, on-hand stock, incoming quantity and sales velocity are all shown.
2. **Stocky data copies across with its relationships intact**
Suppliers, purchase orders, stock adjustments and tax categories.
3. **Built around Japanese purchasing paperwork**
Reduced 8% / standard 10% consumption tax, qualified-invoice registration numbers, PDF and CSV output.

4. Stock only changes when the merchant acts

The sync is read-only and never changes Shopify stock on its own. Stock changes only on four actions: recording a receipt, recording a stock adjustment, confirming a stocktake, or recording a transfer between locations.

5. Useful even if they never used Stocky

Sync Shopify products and inventory, register suppliers, and it works.

Keep current features and future plans clearly separate

Categ ory	Item	How to describe it
Availabl e	Inventory and sales analysis, reorder points, purchase orders, notifications, Stocky copy	"You can use this today"
Availabl e	Receiving, purchase-order status management, emailing POs to suppliers	"You can use this today"
Availabl e	Stock adjustments, stocktakes, transfers between locations, barcode scanning and label printing, multiple suppliers per SKU	"You can use this today"
Planne d	Days-until-stockout and lost-sales visibility, weekly digest	"This is planned"
Planne d	Landed cost, profit and supplier reports	"This is planned"
Availabl e	English UI (follows the Shopify admin language)	"The screens and purchase-order PDFs work in English. Notification emails, Slack and LINE are Japanese only , and support is in Japanese."

Category	Item	How to describe it
Waiting on API	Integration with Shopify's new purchase-order API	"Planned once Shopify ships the API"
Under consideration	Multi-store views, accounting integrations	"A longer-term idea"

Please do not describe an unreleased capability as shipped, or promise that it will "definitely arrive soon".

Why Mumu Labo built it

The point of UreyukiBox is not simply to backfill what Stocky leaves behind.

- Standardise the Japanese tax and document handling that overseas apps struggle to explain
- Produce reasoning a buyer can defend internally, rather than "the AI picked this number"
- Join up the screen where you look at stock, the screen where you decide the order, and the screen where you create the purchase order
- Let small stores start free and add alerts and automation as they grow

Mumu Labo is a sole proprietorship: planning, development, operation and support all sit with the same people, so user feedback goes straight into the next improvement.

A workable structure for an article or video

1. Stocky's end of life, or the purchasing problem being solved
2. What UreyukiBox lets you see
3. Walk through reorder point and suggested quantity on a real screen
4. Create a purchase order and export the PDF / CSV
5. For Stocky users, show the copy procedure
6. State clearly what ships today versus what is planned — including the Japanese-only UI
7. Include your disclosure of the paid relationship, and your referral link

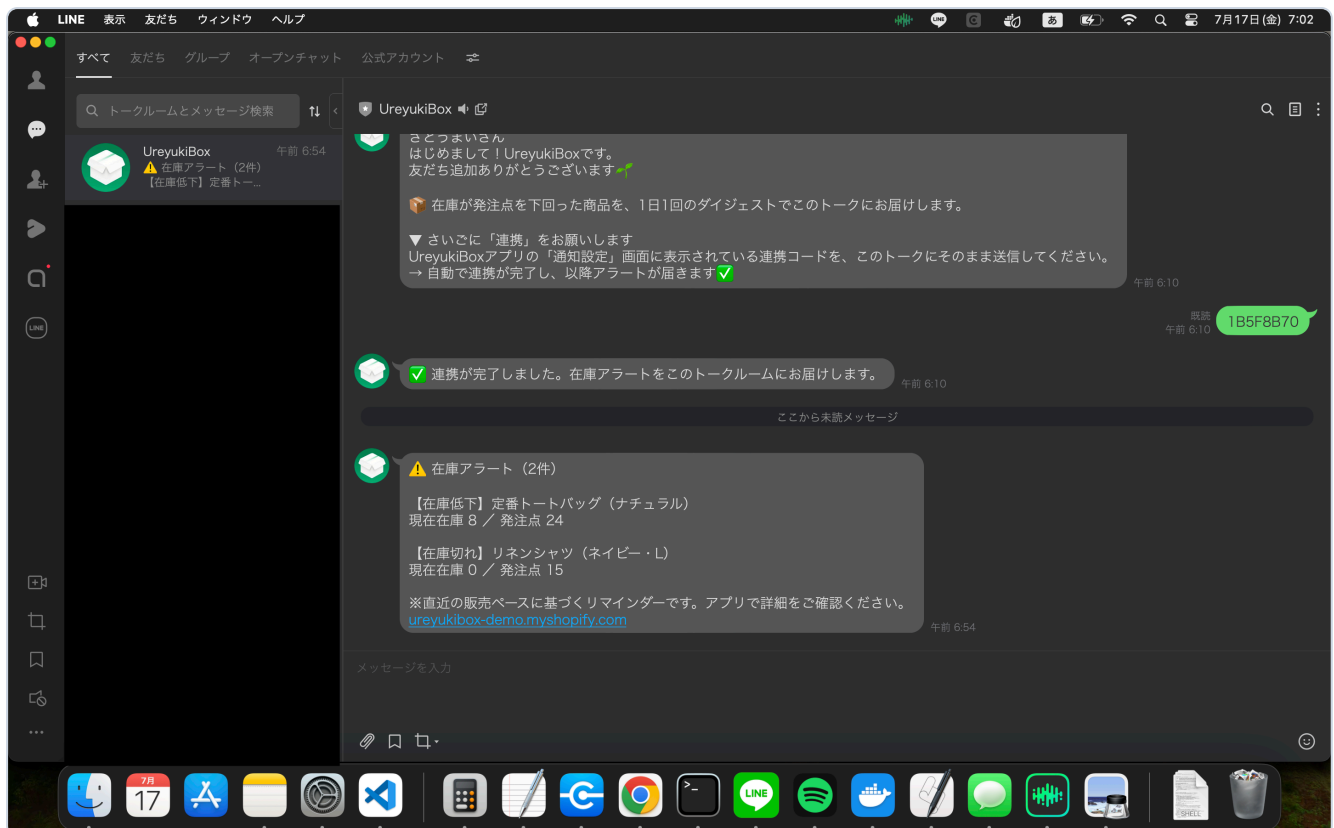

Rules and cautions

- Disclose that the content is sponsored or affiliate-linked, somewhere your readers or viewers will actually see it
- Do not guarantee revenue growth, zero stockouts, or forecast accuracy
- Do not present unreleased features as current features

- Do not make unverifiable claims or disparaging remarks about competing products
- Make sure API keys, login details and customer data never appear on screen

Referral materials

Approved partners are given a review environment, screen assets, product documents and a personal referral link. Please publish the link with its `ref` value exactly as issued — do not edit it.
